A Beginner's Guide to Axe Throwing: Watermelon Edition

Axe throwing has surged in popularity as a sport and recreational activity. While targets are typically wooden, throwing axes at a watermelon can be a fun and satisfying variation, especially for beginners or casual throwers due to the fruit's size and the visual feedback it provides. Here's a step-by-step guide to help you understand the basics of multi-axe throwing using a watermelon as your target.

Safety First

Before engaging in axe throwing, prioritize safety for yourself and others. Ensure that the area is clear and that there is no risk of the axe posing danger to people or property. Wear closed-toe shoes and protective eyewear. Remember, axe throwing should be done in a controlled environment, ideally under supervision if you are a beginner.

Understanding Your Multi-Axe

Multi-axes like the Sheldon YML-3422 are designed with multiple functionalities, which can affect their balance and throwing dynamics. Familiarize yourself with your multi-axe's weight, handle, and center of gravity. For a throwing exercise, the aerodynamics of the axe are crucial for a successful throw.

Setting Up Your Target

Place a watermelon on a stable platform at a safe distance. The ideal distance for throwing axes is typically around 12 to 14 feet from the target, but since watermelons are softer and larger, you might want to start closer until you get the hang of it. The platform should be at a height where the watermelon is roughly at the center of your chest when standing.

The Grip

Hold the handle of the multi-axe near the end for the most control and leverage. Your grip should be firm but not too tight, as over-gripping can negatively impact your throw. If the axe has a paracord handle like the Sheldon YML-3422, make sure the cord is tightly wrapped to avoid unravelling upon release.

Stance and Posture

Stand with your feet shoulder-width apart for balance. The foot opposite to your throwing hand should be forward. For instance, if you're right-handed, your left foot should be in front. Keep your posture straight, and bend your knees slightly to maintain balance and agility.

Aiming

Focus on the watermelon and visualize the axe's path towards the target. Beginners should start by aiming for the center of the watermelon, as it provides the largest margin for error. As you improve, you can aim for more challenging spots on the fruit.

The Throw

To throw the axe, bring it back over your shoulder, and in one smooth motion, bring it forward. As you bring the axe forward, shift your weight from the back foot to the front foot and release the axe when it's nearly level with your line of sight to the target.

The release is crucial: too early, and the axe will go high; too late, and it will hit the ground before the target. The axe should rotate evenly and hit the target with the blade; if it hits with the handle, adjust your distance or the point of release.

Practice and Adjustments

Axe throwing is an art that requires practice. Your first few throws might not hit the target, but with each throw, adjust your technique. Pay attention to the rotation of the axe and how it travels through the air. This feedback will help you refine your distance, strength of throw, and release point.

Cleanup

Once you've completed your throwing session, clean up any debris from the watermelon to prevent attracting insects or wildlife. Additionally, inspect your multi-axe for any damage or wear, especially after hitting such an unusual target. Proper maintenance will ensure the longevity and safety of your tool.

Conclusion

Throwing axes at watermelons can be an enjoyable way to practice your aim and throwing technique while also having a bit of messy fun. It serves as a great introduction to the sport of axe throwing, providing immediate visual feedback and satisfaction when you hit your mark. Remember, the key to successful axe throwing is consistency in your approach, throw, and release, combined with continuous practice and safety considerations. Enjoy the thrill of the throw, and relish in the splash of success as your axe meets the watermelon!
